

- Bandwidth up to 128 Gbps
- Non-blocking architecture
- Up to 4 ports of 10G
- L3 switches
- Stacking up to 8 devices
- Uninterrupted power from battery¹

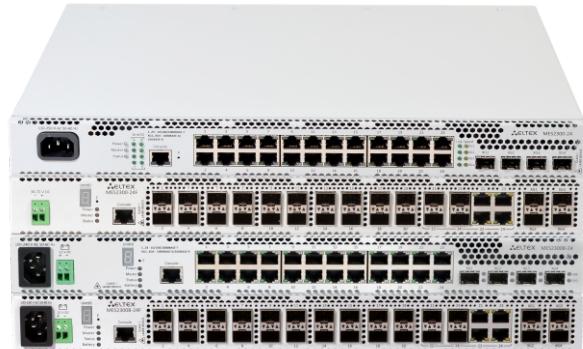

The new generation of MES access switches connects end users to the network of large enterprises, small and medium-sized businesses and service provider networks using 1G/10G interfaces.

MES2300-24F and MES2300B-24F can be also used in service provider networks as the aggregation transport switches.

The device ports support both 1 Gbps and 10 Gbps speeds, providing flexibility in use and the ability to gradually upgrade to higher data rates. The non-blocking architecture allows correct processing of packets under maximum loads, while maintaining minimal and predictable delays on all types of traffic.

Uninterrupted power¹

MES2300B-24 and MES2300B-24F switches have the ability to connect a rechargeable battery to ensure guaranteed power supply in case of the 230 V primary network failure. The switch is equipped with a power module that allows charging the battery when 220 V is available. The backup power system makes it possible to monitor the state of the primary network and notify of a power type switching.

¹ Only for MES2300B-24, MES2300B-24F.

² Values are given for one-way transmission.

³ For each host in the ARP table, an additional entry is created in the switching table.
